

Center Director – Roy Bridges, Jr.

Welcome to the Langley Research Center (LARC) and our NASA family. NASA Langley, founded in 1917, is the nation's first civilian aeronautical research facility and NASA's oldest field center. You are joining a team of men and women who have been the pioneers and innovators expanding horizons and opening frontiers for our explorers in aeronautics and space.

Our Center develops and transfers critical technologies that address national priorities in aeronautic applications, space exploration, and earth sciences. Our work is focused on research for aerospace systems design, atmospheric sciences, biological and physical research, communications technologies, advanced materials and structures, and instrumentation and controls for space, aeronautics, and aerospace applications.

I want to personally welcome you as you come aboard the world's leading organization for research and development in aeronautics and earth sciences. Your opportunities and potential contributions have no bounds.

Again Welcome,

Roy
